

Centre of Endocrinology

The Centre of Endocrinology offers top-quality specialised medicine for everyone in need. The speciality of endocrinology requires cooperation with many other specialists of internal medicine (cardiology, gastroenterology, neurology, rheumatology and oncology). There is also close cooperation with physicians of other clinics: radiologists and nuclear medicine doctors, ophthalmologists, surgeons, obstetricians and gynaecologists.

The doctors of the Endocrinology Center welcome patients with hormonal disorders whose treatment requires the knowledge and skills of a specialist. Patients can go to appointments with a referral from a family doctor or specialist and through e-consultation. We offer paid appointments without a referral.

The multidisciplinary teams of the endocrinology center deal with diabetic foot and gestational diabetes. In this way, we can offer the best treatment in cooperation with several specialists.

In the center, patients are also advised by nurses (diabetes, nutrition and foot care for diabetics) at independent receptions. Patients can come to appointments with a referral from a specialist doctor. We also offer paid appointment times.

The daily work of doctors at the endocrinology center includes supervision of students, residents and assistant doctors. All doctors and nurses share their knowledge at both in-hospital and out-of-hospital training sessions.
