

Centre of Ophthalmology

We diagnose all eye diseases in an outpatient setting, using modern diagnostic technology.

We diagnose pathology of the eyelids and orbit, cataract, glaucoma, corneal diseases and retinal diseases. Paediatric eye diseases are managed by esteemed professionals in their field. For monitoring the course of chronic diseases, we also employ specially-trained nurses in addition to ophthalmologists.

Services

Ophthalmologist's appointment

Appointment with a consultant physician*

Optometrist's appointment

Nurse's appointment

Ophthalmology hospitalisation

Emergency eye treatment

Glaucoma consultation

Eye pathology accompanied by thyroid disease (dysthyroid orbitopathy)
