

# Patient information

We offer our patients person-centred medical and nursing care in which we share information and educate patients about their illness and coping strategies. To do this, we use evidence-based education materials. We involve the patient, family members and other healthcare professionals in the teaching process. We have developed patient information and education materials to help improve the quality of our hospital's healthcare services and support the vision of a person-centred hospital.

In addition, you have an access to [the materials of the Estonian Health Insurance Fund](#)
